Grooper 2.72.0033 Release Notes

Fixed an issue causing appending documents to cause an object reference error in some cases.

Fixed an issue causing batches restricted by ACLs to be incorrectly visible in some contexts.

Grooper 2.72.0031 Release Notes

Fixed an object reference error that would occasionally occur when spawning a batch.

Fixed an issue causing some special characters to be improperly coded in XML export.

Fixed an overflow exception that would occasionally occur when deleting table rows.

Grooper 2.72.0030 Release Notes

Fixed an issue causing task completion status to show incorrectly when a batch is spawned with Move Task History set to true.

Grooper 2.72.0029 Release Notes

Fixed an issue causing an out of memory error when PDF Text Extract is run with an OCR Profile on certain large PDFs.

Grooper 2.72.0028 Release Notes

Fixed an issue causing some PDFs to generate additional pages when processed with Content Action / Split.

Grooper 2.72.0028 Release Notes

Added ability to gracefully handle some non-compliant CMIS responses.

Fixed an error causing PDFs encoded with non-unicode characters to fail to open in some toolkits

Fixed an issue causing a crash when setting visibility on a data field to false when that data field is contained within a data section that is contained within another data section.

Fixed an issue causing incorrect registration of .acf registration on install.

Grooper 2.72.0023 Release Notes

Fixed an issue causing an unmarshalling error when trying to import data from Content Suite

Fixed an issue causing a search or browse error when connecting to a 2016 on-prem EWS server

Fixed an issue causing PDF text extract to occasionally fail to extract certain space characters

Fixed an issue causing the import of a Grooper archive with ACL information attached to generate an object reference error

Grooper 2.72.0022 Release Notes

Fixed an issue where importing an archive would occasionally fail when referenced nodes were not included in the archive.

Fixed an issue causing AD entity names to not correctly display in ACLs when a display name has not been configured for the user or group.

Fixed an issue causing connections to AX to fail when windows authentication was used.

Fixed an issue causing CMIS connections to fail when they encountered a "cmis:item" type.

Fixed an issue causing Grooper to occasionally be unable to access content via AX web services

Fixed an issue causing OCR reader to return results out of order.

Fixed a crash that would occasionally occur when switching from FuzzyRegex to Regex mode.

Fixed an issue causing dilate and erode to generate an object reference error.

Fixed a problem causing Transym OCR to occasionally crash when encountering documents with large dark regions.

Fixed an issue causing attachments to occasionally fail to expand from a PDF

Fixed an issue causing Transym 4 OCR licenses to occasionally become orphaned.

Grooper 2.72.0021 Release Notes

Fixed an issue where importing an archive would occasionally fail when referenced nodes were not included in the archive.

Fixed an issue causing AD entity names to not correctly display in ACLs when a display name has not been configured for the user or group.

Fixed an issue where changing show fields grid would produce an unhandled exception.

Fixed an error caused when trying to connect to an AX Web Services instance that only supports Windows Authentication.

Fixed an issue causing CMIS connections to be unable to import objects from repositories containing objects of type cmis:item

Fixed an error causing Grooper to ignore "Content Mode" on AX web services connections

Using OCR postprocessor without an OCR profile no longer causes results to return out-of-order.

Fixed an unhandled exception that would occasionally occur when changing from fuzzy regex to regex mode on an extractor.

Fixed an object reference error that occurred when running a dilate and erode IP step.

Documents with large dark regions no longer crash negative region removal.

Fixed an error which would occasionally cause PDFs to fail to expand from email attachments.

Grooper 2.72.0020 Release Notes

Fixed an error that occurred when trying to reset all in Grooper Config.

Fixed an error causing "Classify Batch" to not work from context menus.

Fixed an error causing ACL to not save correctly on new batches.

Fixed an error requiring users to manually specify a file extension when exporting to a mapped CMIS filesystem connection

Fixed an unhandled exception that occurred when trying to configure security on a machine not connected to a domain

Fixed an error where import descendants would occasionally generate an out-of-range exception

Grooper no longer fails to start when a compiled object library is cloned in the same repository

Fixed an error where column values would be duplicated when field name matched group name.

Fixed an error where importing at a folder level other than 1 would occasionally generate an index out of range error.

Fixed an unhandled exception that would be generated when trying to copy properties on a Review step

Fixed an unhandled exception that would occasionally be generated when closing task in Attended client.

Fixed an error preventing users from expanding batch folders after cutting and pasting.

Fixed a caching issue that occurred when reviewing multilevel folders

Fixed an unhandled exception generated when trying to connect to Excel through Microsoft's Excel-to-ODBC Driver

Fixed an issue with exporting to an AX field with the type "Number"

Fixed an issue causing level 2 document pages to fail to display correctly in navigator.

Fixed an unhandled exception that would occasionally happen when loading code editor control.

Added additional validation to database mapping that detects when referenced fields have been deleted

Fixed an issue occasionally preventing data sections from adding or deleting correctly

Added support for .acf filter in Attended Client.

Fixed an error preventing Spawn Batch from correctly appending the source batch name.

Fixed an error causing LayoutData.json to only get created by IP profiles that include line removal.

Fixed an error causing some email attachments with utf8 encoding to not expand correctly

Corrected default values displaying as bold when a new OCR engine is selected

Fixed an error preventing Prime OCR from loading correctly

Grooper 2.72.0019 Release Notes

Fixed an error where importing could result in the creation of duplicated nodes

Fixed an error where tables with non-standard SQL datatypes would fail to preview correctly

Added advanced Code 39 barcode reading to separation

Enabled OCR synthesis for additional languages

Fixed an exception caused by an empty permutation in regular expressions

Layout IP steps no longer run automatically when a page lacks layout data

Fixed an issue where AX exports would sometimes change page order

Fixed an issue with Full Page Section extraction

Fixed an issue where pattern-based multi separation split incorrectly

Fixed an issue generating an unhandled exception when service installed before repositories

Fixed an issue causing OMR registration zones to generate unhandled exceptions

Fixed an issue causing errors when upgrading from 2.70 to 2.72.0017

Disallowed dragging OCR profiles to local resources folders

Fixed an issue where the count of objects was off while running delete all on an AX repository

Fixed an issue preventing certain batches from copying successfully

Resolved an unhandled error generated by running find from the OMR zone dialogue

Resolved an error generated occasionally when pasting documents from a CMIS source

Fixed an issue causing the split activity to fail on large documents (>700 pages)

Fixed an issue causing OCR profiles to not save correctly when only segmentation mode was changed

Resolved a problem with license volume being counted incorrectly

Resolved an unhandled exception generated by certain configurations of invisible table columns

Resolved conflicting error messages generated when trying to map properties to a content model with no data model

Fixed an issue causing an unhandled exception when using copy all properties on a CMIS connection

Fixed an issue that would prevent import of some exported Grooper configurations

Fixed an issue where Import Descendants occasionally failed over EWS
