

Grooper 2.90.0064 Release Notes

Fixed an unhandled exception that would occur when trying to rubberband a data field whose parent instance uses "Show Fields in Grid" and has a rubberband OCR profile configured.

"Show Fields in Grid" no longer allows users to delete read-only values.

Fixed an object reference error that would occur when trying to set an activity before selecting a process step.

Grooper 2.90.0063 Release Notes

Fixed an Object Reference Error that would occasionally occur when browsing a Box repository.

Nested AD Groups now interact correctly with Access Control Lists.

Field Label Foreground Color property now sets the color of the field label foreground.

Deleting lookups that are missing SQL connections no longer causes an object reference error.

Fixed an issue causing upgrading from 2.80 to 2.90 to delete some override extractors.

Classification viewer can now use lexicon-based flags.

Grooper 2.90.0061 Release Notes

Fixed an upgrade issue with fields that have barcode detection configured.

Grooper 2.90.0060 Release Notes

Fixed an issue preventing lookup properties from pasting correctly.

Fixed an issue causing separation logic to fail after deleting documents.

Group names are no longer accessible from Arrays and Ordered Arrays.

Fixed a display issue with nested sections.

Fixed an upgrade issue with Database Lookup fields.

Fixed a "sequence contains no elements" error that would occasionally occur during OCR.

Manual lookups now no longer fire automatically.

Grooper 2.90.0058 Release Notes

Fixed an issue causing the Direction property to behave incorrectly when Enforce Page Boundaries is set to true.

Fixed an issue causing manual lookups to be erased after navigating to the next document.

Added a validation error when trying to export to an ODBC data connection.

Fixed an issue causing database lookups to not be performed when configured on an override.

Grooper 2.90.0057 Release Notes

Added option to create batch in EveryN mode on Spawn Batch activity.

Fixed an object reference error that would occur rarely when running Recognize.

Fixed an object reference error that would occasionally occur when opening a task in Attended Client.

Fixed a crash that would occasionally occur when running Spawn Batch.

Grooper 2.90.0055 Release Notes

"Generate Local Type" will no longer generate duplicate content model names.

Fixed an issue causing the rendition dropdown to select "children" when selecting a document.

Fixed an issue causing the index panel to scroll to the top when selecting fields.

Fixed an issue preventing import using an IMAP CMIS connection.

Grooper 2.90.0054 Release Notes

"Generate Local Types" will no longer generate duplicate content model names.

Fixed an issue causing the index panel to snap to the top when selecting fields.

Added a warning before initializing over an existing Grooper database.

Grooper 2.90.0052 Release Notes

Fixed an issue that would occasionally prevent pages from combining into a PDF.

Fixed an issue causing child tables to not update correctly when a parent field was updated.

Fixed an issue preventing field zone IP profiles from converting correctly when upgrading to 2.90.

Fixed an issue causing CMIS queries to generate exceptions rather than validation errors.

Fixed an issue causing the document viewer in attended client to snap to page one when navigating through an unpopulated field.

Fixed an unhandled exception that occurred when changing certain properties of batches while paused.

Grooper 2.90.0051 Release Notes

Fixed an issue causing x86 versions of Grooper to ask for a DLL when using the File System Import Scan Profile.

OMR can now detect circular OMR regions.

Fixed an issue occasionally preventing Data Element Overrides from working correctly on sections.

Fixed an issue causing Load Properties to fail when loading properties from OpenText Content Server

Fixed a "Sequence contains no elements" error that would occasionally occur when browsing a Box repository.

Fixed a viewer issue when the data model contains multiple child sections with "Show Fields in Grid" Property set to true.

Fixed an issue causing an error when deleting expression property text on a CMIS field mappings object.

Fixed an error that would occur when configuring an override on a field configured to read barcodes.

Fixed a crash associated with the Detect Signature extractor.

Fixed an issue preventing correct viewer locating when using Detect Signature extractors.

Fixed an issue occasionally causing calculate expressions to ignore the "set if empty" flag.

Grooper 2.90.0049 Release Notes

"Scan & Insert" and "Invert" no longer share the same key shortcut

Fixed an issue causing "Content Action: Split" to rotate pages when Render resolution is set above 400 DPI.

Fixed an Obejct Reference Error that would occasionally occur when upgrading from 2.80

Fixed an Argument Out of Range Error that would occur occasionally when exporting non-English documents.

Fixed an issue preventing Box versioning from functioning as intended.

Fixed an issue with Box uploads of files greater than 20MB.

Fixed a Sequence Contains no Elements error that would occur during Database Export with certain content models.

Grooper 2.90.0047 Release Notes

Fixed an issue causing barcode detection settings to be lost after upgrading from 2.80.

Fixed an issue causing un-publishing a linked process from a second repository to also un-publish any thread pools used by that process.

Fixed an issue occasionally causing a crash when running Excel to CSV

Fixed an issue causing some system nodes to get generated without attributes on repository initialization.

Added a "signature detection" value extractor.

Grooper 2.90.0046 Release Notes

Fixed an issue preventing browsing with Documentum CMIS connections.

Grooper 2.90.0045 Release Notes

Fixed a "sequence contains no elements" error that would occasionally occur during database lookup.

Fixed an error that would occur when deleting the last section in a document.

Fixed a "value cannot be null" error that would occasionally occur on file system import.

Fixed an issue preventing attachments from expanding correctly on email messages with no body.

Fixed an issue occasionally causing not all native PDF text to extract correctly during Recognize.

Fixed a "given key is not present in the dictionary" error that would occasionally occur when accessing character data on the parent of a recognized PDF or Excel document.

Grooper 2.90.0044 Release Notes

Fixed an issue causing Excel to CSV to occasionally fail when run as a service.

Fixed an issue that would occasionally cause separation to fail on content types with fixed pagination.

Fixed an issue with bullet detection.

Fixed some issues with CMIS queries, search, browsing, and metadata export affecting Box connections.

Fixed an upgrade issues with certain value extractors on data fields and data element profiles when upgrading from 2.72 to 2.90.

Fixed a regression issue with Labeled OMR when upgrading to 2.90.0041.

Fixed an issue causing incorrect creation of XML files when XML export was run as part of a batch process.

Grooper 2.90.0041 Release Notes

Fixed an issue occasionally causing a KeyNotFound exception when importing objects into Grooper.

Fixed an issue preventing the "Execute Profile" IP command from correctly saving layout data.

Fixed an issue causing database lookup to fail to execute after extraction if an override is set on the lookup field.

Fixed an issue with export mappings involving fields with numeric names.

Fixed an arithmetic overflow error that would occasionally occur with Crop and Contrast Stretch.

Fixed an issue that caused marking an image as "reviewed" to move focus to the next image in the batch order, regardless of sort option.

Grooper 2.90.0040 Release Notes

Fixed an issue that would occasionally cause Database Export to generate duplicate rows.

Fixed an issue causing all Azure OAuth tokens to expire after 90 days. **Please note: this change will cause all Sharepoint, OneDrive, and Office 365 CMIS connections to de-authenticate. Please reauthenticate all of your Azure-based CMIS connections after installing 2.90.0040 or upgrading from 2.80.**

Grooper 2.90.0038 Release Notes

Fixed an issue causing occasional unhandled exceptions while writing LINQ expressions.

Fixed an issue causing extracted barcode values to be highlighted in the wrong position.

Fixed an issue causing incorrectly configured database exports to occasionally report success.

Fixed several issue occasionally causing errors on importing some Grooper object archives

Fixed an error that would occur when trying to update content using the Box.com connector.

Fixed an issue occasionally causing text extraction to generate an unhandled exception when run on some data tables.

Fixed an error causing references generated by overrides to not show correctly in the references tab.

Fixed an issue causing unhandled exceptions on some configurations of Visual Classification.

Fixed an issue causing attended client to crash when scanning on Inotec scanners.

Fixed an expression error that was generated by some valid mapping expressions.

Grooper 2.90.0037 Release Notes

Fixed an issue causing unattended client to fail to properly set the thread pool.

Grooper 2.90.0036 Release Notes

Fixed an issue causing the built-in credit card number extractor to occasionally format results incorrectly.

Fixed a "mailbox unknown" error that would occasionally occur when browsing IMAP CMIS+ repositories.

Fixed an unhandled exception that would occur when testing extraction from a data section on an unclassified document.

Fixed an error that would occur when performing classify review on a document with no classification candidates.

Grooper 2.90.0035 Release Notes

Fixed an issue causing training a frequency lexicon to generate an error.

Fixed an issue occasionally causing some lexicons to generate an error on upgrading from 2.80.

Fixed an unhandled exception that would be generated when attempting to access Data Type sub-elements that are themselves Data Types.

Fixed a same key error that would occasionally occur when upgrading content categories from 2.80.

Fixed an error that would occur when upgrading certain IP steps from 2.80.

Fixed an unhandled exception that would occur when attempting to open the data field sub-element name dropdown before configuring an extractor.

Corrected the description for the regular expression syntax property on the lookup options for lexicons.

Fixed an issue causing lexicon translation to not work when using a named group.

Grooper 2.90.0033 Release Notes

Fixed an issue causing "sort by priority" to sort by date instead.

Fixed an issue causing "sort by date" to generate an unhandled exception.

Fixed an issue that would occasionally prevent office documents from correctly converting to PDF when run as a service.

Fixed an issue causing an object reference error when selecting Mapped CSV extract with no mapping lexicon specified.

Fixed an issue preventing CSV extract from working correctly when mapping to named columns instead of index location.

Fixed multiple issues occasionally causing an exception when trying to process Excel spreadsheets.

Fixed a data contract error that would occasionally occur when overriding database lookups in Data Element Overrides.

Fixed an issue causing database lookups to occasionally fail to fire on complex content models.

Fixed an error that would occasionally occur when editing a generated default value on a data field.

Fixed an exception that would occasionally occur when trying to run extraction on an unclassified document.

Fixed multiple errors that would occur when trying to configure an override on a default value expression.

Fixed an issue causing validation errors on some import mappings after upgrading from 2.80.

Grooper 2.90.0030 Release Notes

Fixed an issue causing users to be unable to copy and paste folders in a Box repository through the Repository Browser.

Fixed an object reference error that would occasionally occur when selecting some documents in the Batch Viewer.

Fixed an issue preventing named groups from correctly showing up in the Sub-Element Name property on extractors in some cases.

Grooper 2.90.0029 Release Notes

Fixed an issue causing burst-generated xlsx documents to not open correctly outside of Grooper.

Fixed an issue causing an object reference error when exporting a file using "Send To -> File System."

Fixed an index out of range error generated by certain read zones.

Grooper 2.90.0028 Release Notes

Fixed an issue causing the sticky field property to not work properly.

Fixed an issue causing "Object Type ID" to appear as a property when configuring mappings to a Box CMIS connection.

Fixed an issue causing tabbing out of fields to sometimes fail to correctly select the next field.

Grooper 2.90.0027 Release Notes

Fixed an Invalid Argument error that would occasionally occur during Data Review

The Data Annotation property now correctly displays in bold when it has been changed from its default value.

Fixed an issue causing a Data Field to be unable to access the named groups in the return value of a referenced Key-Value pair.

Fixed an issue causing references on Data Element Profiles to fail to be visible.

Grooper 2.90.0026 Release Notes

Fixed an issue causing .txt files to fail to show weightings after classification training.

Updated the description and examples for Should Submit statements.

Fixed tooltip on "Fit Height" button in the document viewer.

Grooper 2.90.0025 Release Notes

Fixed an object reference error that occurs when running the extraction tester against certain content types when a data element override is applied.

Fixed an issue causing Continuous Tone Display to fail to retain the updated image.

Fixed an error that occurs when overriding the autocomplete property.

Fixed an issue preventing CMIS lookup from firing when using a field with a type of "Number."

Grooper 2.90.0024 Release Notes

Fixed an index out of range error that would occasionally occur during extraction.

Grooper 2.90.0023 Release Notes

Fixed a validation error that would occasionally occur when writing a should submit expression.

Grooper 2.90.0022 Release Notes

Fixed an issue causing string literals to generate errors in mapping expressions.

Fixed an issue causing control sheet separation to occasionally fail.

Fixed an issue causing table creation to fail on data connections.

Fixed an issue causing database export to be unable to map tables contained within data sections.

Grooper 2.90.0021 Release Notes

Fixed an issue that would cause some repository upgrades to fail.

Fixed an issue preventing some types of reports to fail to run correctly.

Grooper 2.90.0020 Release Notes

Fixed an issue occasionally causing validation errors on valid export mappings.

Fixed an issue casing BETWEEN to revert to '>=' in some CMISQL query windows.

Fixed an issue preventing the deletion of multiple batches simultaneously.

Fixed an issue preventing fuzzy weightings from working correctly with lexicons.

Fixed an issue preventing "read only" from being enforced when set on an imported .zip.

Grooper 2.90.0019 Release Notes

Fixed an unhandled error that would occasionally occur when entering an invalid format specifier

Fixed an issue causing fuzzy extraction with minimum confidence set rejecting results that exactly matched that minimum confidence

Fixed an issue causing collapsing and expanding a data section during extraction testing to generate an unhandled exception

Fixed an issue causing page filter to not properly reference negative range specifiers

Fixed an error that occurs when mapping to a SQL column named "index"

Fixed an inability to launch Grooper Attended Client as a debug target when debugging custom scripts from Visual Studio

Added more logging detail when encountering exception during task submission

Fixed an issue causing database table import to occasionally fail.

Grooper 2.90.0017 Release Notes

Added new error handling / error reporting UI Dialog

Grooper 2.90.0016 Release Notes

Fixed an issue causing hidden required fields to prevent Data Review users from being able to complete task

Added the ability to choose if ACL information is included in an export

Fixed an unhandled exception that would occasionally occur when trying to access a filestore

Fixed an object reference error that would occur when trying to import a Grooper .zip with ACL information attached

Fixed an issue preventing XML transform activity from functioning

Fixed an issue preventing essentials and international downloads from working

Fixed an unhandled exception that would occur when trying to publish to another repository

Fixed incorrect description on the "manual start" property

Fixed an issue causing "load property values" to not enable the "OK" button

Fixed occasional compile errors that would occur when validating expressions

Fixed an issue causing "ignore unmapped items" property on mapped export to not ignore unmapped items

Fixed an issue causing file extensions to be missing from exported files

Fixed an unhandled exception that would occur when an object with a sparse link was deleted from a filesystem.

Grooper 2.90.0013 Release Notes

Fixed an issue causing an unhandled exception when a machine that is not a member of a domain tries to edit ACL items.

Added an indication of whether Grooper Design Studio is running as admin.

Fixed an issue causing an error when Grooper Config was closed without generated a configuration file.

Fixed an error occasionally causing "Import Descendants" to create an empty batch

Fixed several problems with expressions on fields and mappings causing them to generate validation errors

Fixed an issue occasionally causing the zoom tool to stop working

Fixed an issue causing lookup tables to occasionally generate bad SQL queries.

Grooper 2.90.0009 Release Notes

Fixed an issue causing import mappings to associate with AX database field number rather than AX field name.

Fixed an object reference error that would occur when running Recognize with no OCR profile.

Fixed an issue causing imports of objects with associated ACLs to occasionally fail.

Fixed an issue causing MS office integration to only work when running Design Studio as an administrator.

Fixed an unhandled exception that would occur when resizing the batches area in dashboard to zero height.

Fixed an issue causing the NOT operator to NOT be formatted correctly in the intellisense editor

Fixed an unhandled exception that would occasionally occur when loading the list of columns to map in Database Export mapping.

Fixed an issue causing data fields with values below minimum confidence not populating correctly.

Fixed the elapsed time being displayed incorrectly when a CMIS import took over 24 hours.

Fixed an issue where closing the clone batch window instead of hitting cancel would create orphaned files.

Fixed an issue occasionally causing PDF Text Extract to fail to extract certain spaces.

Fixed an error causing an unhandled exception when mapped data fields shared names with intellisense functions.

Fixed an Object Reference Error that would occur when inheriting from Webservice.

Grooper 2.90.0008 Release Notes

Fixed an issue preventing the creation of child folders in Box.

Fixed an issue causing Box document export to fail with an unhandled exception.

Fixed an issue causing children of data sections to be unmappable when configuring Database Export

Fixed an issue that would occasionally cause an object reference error when extracting.

Fixed an issue causing "Object Type ID" to display as a mappable field when configuring SharePoint export mappings
